Text Analytics: Practical 1
(for Lecture 1: Introduction)

1) Install Python on your laptop and make sure it is working correctly. It should be the right version (3.4).   Also, install the nltk package and import the databases that go with it.

2) Install R, and run the file provided to get a quick idea of how it works.

[NB for both of these systems you need to get used to using a command-line, tereminal interface.]
